Designed according to the modern architectural demands, it makes a difference with its unique form wherever it's applied.

It is designed to adapt to any outdoor environment thanks to its unexampled features.

The roof of this pergola consists of aluminium louvres with various functions. Keep out the sun, let in a breeze or stay one step ahead of the rain? With the Somfy remote control, rotating the louvres in your pergola has never been so easy.

After a rain shower, the roof can be opened again quickly and easily, while the water is drained in a controlled manner. What is more: the patented shape of the louvres prevents you from getting an unexpected shower yourself when you open the louvres after a period of rain!
